

Solar On-site Energy Charging China

Overview

What are solar-storage-charging technologies in China?

Solar-storage-charging technologies in China began with the 2017 launch of the first solar-storage-charging station in Shanghai's Songjiang District. Rapid technological advances have led to increased charging speeds and increasingly widespread use of charging stations.

What is solar-storage-charging?

"Solar-storage-charging" refers to systems which use distributed solar PV generation equipment to create energy which is then stored and later used to charge electric vehicles. This model combines solar PV, energy storage, and vehicle charging technologies together, allowing each to support and coordinate with one another.

Does China offer a subsidy for onsite solar?

In addition, the Chinese government offers a subsidy for onsite solar generation of ¥.37/kWh (about \$.06/kWh). In 2018, this subsidy decreased for the first time, and is expected to continue to decrease in the coming years.

What is a guiding opinion on promoting solar-plus-storage technology & industry development?

Emphasis was placed on developing solar-plus-storage technologies. The release of the Guiding Opinions on Promoting Energy Storage Technology and Industry Development helped to increase the development of the combined solar PV, energy storage, and EV charging model.

How many kW does a solar power station have?

The station is also equipped with one set of 600 kW and two sets of 360 kW flexible group charging and group control units, as well as a 100 kW photovoltaic canopy consisting of 360 photovoltaic panels and a 300 ampere-hour energy storage system.

Is onsite solar a good option for C&Is?

Onsite solar is the primary opportunity for corporates to focus on in China. A steep drop in costs has resulted in greatly improved returns, making PPAs for onsite generation an attractive option for C&Is. In addition, the Chinese government offers a subsidy for onsite solar generation of ¥.37/kWh (about \$.06/kWh).
