

Solar panels in the Swedish power system

Overview

Renewable energy could be power generated from water, wind or the sun, or any other source that is replenished through a natural process. The share of renewable energy used in Sweden keeps growing.

A heat pump uses renewable energy sources by transferring heat from the ground, lake water or the air. The number of heat pumps in Sweden has increased dramatically since.

Using hydrogen is another potential means of decreasing carbon dioxide emissions. Among with many other countries, Sweden is looking into the possibility of using hydrogen as fuel, or for electricity or heating.

Ethanol research began in the 1980s, and Sweden has been among the world leaders in this field. But the environmental benefits compared with petrol have been much debated since.

So-called passive houses are built without conventional heating systems and are kept warm by the heat given off by their occupants and.
