

Solar photovoltaic power generation price

Overview

Solar panels cost between \$2.55 and \$3.15 per watt. For an average 6.5 kW solar system, you'll spend anywhere from \$16,600 to \$20,500 before accounting for tax credits or rebates. How much do solar panels cost?

For an average 6.5 kW solar system, you'll spend anywhere from \$16,600 to \$20,500 before accounting for tax credits or rebates. You can break down the bulk of the cost of your solar panel system by looking at the panels and equipment, labor and permits. Solar panels cost between \$0.30 and \$0.90 per watt without labor and other fees.

What is residential solar PV?

As solar prices continue to decline, utility solar PV plays a key role in the global energy transition, supporting large-scale renewable energy adoption. Residential solar PV refers to home solar power systems that generate electricity using photovoltaic (PV) panels.

Where did photovoltaic cost data come from?

Photovoltaic cost data between 1975 and 2003 has been taken from Nemet (2009), between 2004 and 2009 from Farmer & Lafond (2016), and since 2010 from IRENA. Prices from Nemet (2009) and Farmer & Lafond (2016) have been converted to 2024 US\$ using the US GDP deflator, to account for the effects of inflation.

Why do solar panels cost so much?

As the size of a solar array increases, photovoltaic modules represent a higher percentage of total costs, while the percentage of soft costs decreases. This is also why large projects are more sensitive to solar module prices, and more dependent on low-cost imports from overseas.

Are solar panels financially viable?

As the size of solar projects increases, their cost per watt decreases

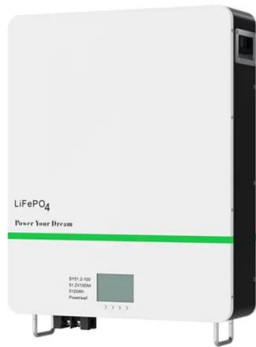

significantly. This is reflected in the average prices from most recent NREL technical report: Note how the cost per watt is nearly 70% lower in utility-scale PV systems, compared with small residential systems. However, solar panels are financially viable at all project scales.

Does commercial solar cost a lot?

The solar price for commercial projects varies based on system size, location, energy needs, and available incentives. Unlike residential solar, commercial solar pricing benefits from economies of scale, resulting in a lower levelized cost of electricity (LCOE).
