

Solar tracking system price

Overview

How much does a solar tracker cost?

A solar tracker generally ranges from \$1,000 to \$3,000 per kilowatt of installed capacity, which translates to a total cost of \$25,000 to \$75,000 for residential systems, depending on various factors such as system design, location, and project scope. What are the different types of solar trackers?

There are two types of solar panel trackers, dual-axis trackers and single-axis. Both types of solar trackers offer a vast amount of advantages and help increase the efficiency of residential and commercial solar systems. The functions, benefits, and drawbacks of dual and single solar trackers are explained below.

How much does solar tracking cost?

Tracking equipment can cost anywhere from \$500 per panel to over \$1,000 per panel. If you included a single-axis tracking system on the same array, it would drive the cost up to about \$20,000. That's a premium of 57% over the cost of the fixed array for just 35% more solar output.

Are solar trackers expensive?

Solar trackers are very expensive and can easily double project costs. Solar trackers are made up of moving parts, which means they are more likely to break. This leads to higher maintenance costs. Deciding to install trackers may require additional site planning and preparation, including digging additional wiring trenches and extra site grading.

What is a solar tracker?

A solar tracker is a device that follows the sun as it moves across the sky. When solar trackers are coupled with solar panels, the panels can follow the path of the sun and produce more renewable energy for you to use.

What are the benefits of solar trackers?

There are several benefits of solar trackers. Solar panel trackers increase electricity generation by aligning panels optimally with the sun's path. Dual-axis trackers offer unmatched efficiency, generating up to 40% more electricity. Single-axis trackers boost output by 20-30% over fixed systems.

Do solar trackers work with solar panels?

When solar trackers are coupled with solar panels, the panels can follow the path of the sun and produce more renewable energy for you to use. Solar trackers are usually paired with ground-mount solar systems, but recently, rooftop-mounted trackers have come onto the market.

Solar tracking system price

[Suntactics solar trackers , dual axis solar tracker](#)

The sTracker is a high efficiency, low maintenance, ground mount dual axis solar tracking system. Solar tracking directs solar panels at the sun all day long for ...
