

# Sweden borrows outdoor power

## Overview

---

A heat pump uses renewable energy sources by transferring heat from the ground, lake water or the air. The number of heat pumps in Sweden has increased dramatically since the 1990s, which ha.

What is Sweden's energy plan?

Sweden's energy plan is to have 65% of energy produced by renewables by 2030 and 100% by 2040. Renewable energy includes wind, solar, biomass and geothermal energy sources.

Why should Sweden invest in wind power?

Alongside nuclear expansion, enhancing wind power generation can capitalize on its current contribution and bolster Sweden's clean energy portfolio. By focusing on these technologies, Sweden can secure a robust supply of green and sustainable electricity to meet future demands and continue its leadership in low-carbon energy use.

How does Sweden use energy?

In Stockholm, the body heat from commuters passing through Stockholm Central Station is used to heat a nearby building, and in the southern town of Växjö, there are passive high-rises. More than half of the energy used in Sweden comes from renewable energy sources. Find out more about Sweden's energy use.

What is the share of renewable electricity use in Sweden?

The share of renewable electricity use is high in Sweden. Hydro, wind, and solar power together accounted for 49.8% of the electricity produced in the country in 2014. When measured against national electricity consumption, the share rises to 55.5%.

How much wind power does Sweden use?

According to the Swedish National Action Plan (2010) for the European Union 2009 Renewable Energy Directive the Swedish government plan is 8% wind

power of electricity (12.5 TWh) in 2020. The Swedish Energy Agency recommended in 2007 a target of 30 TWh of wind power in 2020. The annual electricity use was in average 146 TWh in 2000–2009.

Can Sweden continue to lead in low-carbon energy use?

By focusing on these technologies, Sweden can secure a robust supply of green and sustainable electricity to meet future demands and continue its leadership in low-carbon energy use. The history of low-carbon electricity in Sweden illustrates both extraordinary growth and unfortunate setbacks, particularly in nuclear power.
