

# **Swedish solar power generation for home use**

## Overview

---

How much solar power does Sweden produce?

A paid subscription is required for full access. Sweden's electricity generation from solar photovoltaic amounted to 1,963 gigawatt hours in 2022. Between 2012 and 2022, production levels increased by more than 1.8 terawatt hours. Additionally, Sweden's solar PV capacity additions amounted to over 800 megawatts in 2022.

What percentage of Sweden's electricity comes from renewable sources?

In 2022, more than 60 per cent of Sweden's electricity came from renewable sources. The government's energy policies have also promoted the use of renewable energy. The Electricity Certificate System – a market-based support system for renewable electricity production – is one example.

How does Sweden use energy?

In Stockholm, the body heat from commuters passing through Stockholm Central Station is used to heat a nearby building, and in the southern town of Växjö, there are passive high-rises. More than half of the energy used in Sweden comes from renewable energy sources. Find out more about Sweden's energy use.

Can Sweden achieve 100% renewable electricity generation by 2040?

Meanwhile, Sweden has set an ambitious target of achieving 100% renewable electricity generation by 2040. The IEA recommends the government carefully assess how to reach that target and what the implications will be for grid stability and security of supply. One key factor for maintaining a secure electricity supply is the regional power market.

Does better energy have a solar park in Sweden?

Better Energy has grid-connected its second large-scale solar park in Sweden in 2024, located at Hovby Airport in Lidköping Municipality. At the time of the

solar park's Commercial Operation Date, Better Energy operated Sweden's two largest solar parks.

How much solar power does Sweden have in 2023?

This surge includes approximately 67.6 MW from centralized ground-mounted PV parks and 1 533.3 MW from distributed PV systems, predominantly for self-consumption. Total Installed PV Capacity: By the end of 2023, Sweden's total installed PV capacity reached nearly 4 000 MW, a 67% increase from the previous year.
