

# **The bigger the solar panels the better**

## Overview

---

Are bigger solar panels better?

Advantages of bigger panels: You get a slightly better Watts per m<sup>2</sup> because you have more solar cells and less aluminium framing. So you should be able to fit a slightly bigger system on your roof. Fewer panels are used for the same sized system, so there are fewer electrical connections, which in theory means a more reliable system.

Do I need more solar panels?

Larger homes and those that use higher amounts of energy, would need more panels. Compatibility issues – Adding more panels to an existing system may not be straightforward, especially if the system is older or incompatible with newer systems.

Why should you install more solar panels?

All things being equal, installing more solar panels generally provides more benefits in terms of energy generation, long-term cost savings and overall efficiency. Solar panels have a longer lifespan than batteries and directly contribute to generating clean, renewable energy for your home.

Should I add more solar panels or batteries to my home energy system?

To understand whether it's better to add more solar panels or batteries to your home energy system, it's a good idea to know exactly how these devices work individually and together. Solar panels convert sunlight into electricity, which can be used to power your home directly.

Do solar panels need more batteries?

If you're already generating large amounts of energy from your solar array with the majority being sent to the grid, more batteries will help your own energy efficiency and reduce your personal energy waste. Solar panels have a longer lifespan (25-30 years) compared to batteries (10-15 years).

Why should you choose a solar panel for your home?

Limited roof space – The number of panels that can be added may be restricted by the available roof space. Increased energy storage – More batteries means you can store more energy. This means you can run your home for longer periods of time just from the battery. If paired with solar panels, this is the cheapest electricity you can get.

## The bigger the solar panels the better

### Solar Panel Size: Is Bigger Better?

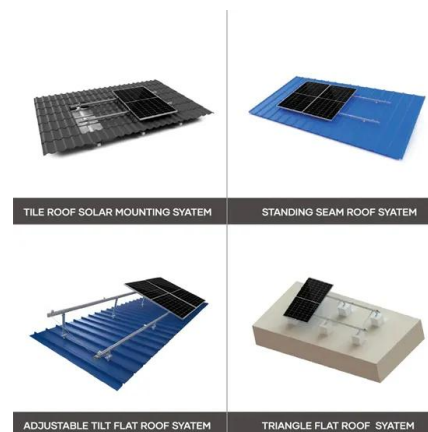

Fewer panels are used for the same sized system, so there are fewer electrical connections, which in theory means a more reliable system. Fewer panels means a slightly ...
