

The current proportion of solar power generation used by households

Overview

Of the total solar capacity installed in the U.S., over 26 percent corresponds to residential installations. This segment has grown in recent years, reaching some 4.7 million installations in 2023. How much solar energy does the US use?

4.4% of our global energy comes from solar power. China generates more solar energy than any other country, with a current capacity of 308.5 GW. The US relies on solar for 3.9% of its energy, although this share is increasing rapidly every year. 3.2 million US homes have solar panels installed.

How much solar energy does a home use in 2022?

In 2022, residential solar panels generated 37 million megawatt-hours, accounting for 18% of all solar energy in the US, according to the Energy Information Administration. The average US home uses about 11,000 kilowatt hours per year, meaning residential solar panels generated enough electricity to power 3.4 million homes in 2022.

How many people use solar panels in the US?

The US relies on solar for 3.9% of its energy, although this share is increasing rapidly every year. 3.2 million US homes have solar panels installed. 3,975,096 people are employed in the solar industry worldwide, and 263,883 of these are in the United States.

What percentage of electricity is generated by solar?

Renewables as a whole contributed 38% of overall electricity generation (according to Ember Climate), and solar accounted for 11.5% of total renewables (see below). This gives an overall figure of 4.37%. In the US alone, the figure is slightly lower. The latest data shows solar producing 3% of total US electricity in 2020.

What percentage of solar installations are residential?

Of the total solar capacity installed in the U.S., over 26 percent corresponds to residential installations. This segment has grown in recent years, reaching some 4.7 million installations in 2023. Increasing household electricity bills are a large motivator for the installation of residential solar systems.

How much energy does a home use a year?

The average US home uses about 11,000 kilowatt hours per year, meaning residential solar panels generated enough electricity to power 3.4 million homes in 2022. Solar energy is one of the fastest-growing renewable energy sources in the US, according to the Department of Energy.
