

# Types of photovoltaic panel inverters

## Overview

---

Learn what a solar inverter is, how it works, how different types stack up, and how to choose which kind of inverter for your solar project.

A solar inverter is really a converter, though the rules of physics say otherwise. A solar power inverter converts or inverts the direct current (DC) energy.

The solar process begins with sunshine, which causes a reaction within the solar panel. That reaction produces a DC. However, the newly created DC is not safe to.

When it comes to choosing a solar inverter, there is no honest blanket answer. Which one is best for your home or business?

That depends on a few factors: 1. How.

Oversizing means that the inverter can handle more energy transference and conversion than the solar array can produce. The inverter capabilities are more.
