

UK solar cell system

Overview

The UK's annual is in the range of 750–1,100 per square metre (kWh/m²). London receives 0.52 and 4.74 kWh/m² per day in December and July, respectively. While the sunniest parts of the UK receive much less solar radiation than the sunniest parts of Europe, the country's insolation in the south is comparable with that of central European countries, including

OverviewSolar potentialHistoryRooftop solarLarge scale solar farmsPlanning considerationsGovernment programmesFuture

The UK's annual insolation is in the range of 750-1,100 kilowatt-hours per square metre (kWh/m²). London receives 0.52 and 4.74 kWh/m² per day in December and July, respectively. While the sunniest parts of the UK receive much less solar radiation than the sunniest parts of Europe, the country's insolation in the south is comparable with that of central European countries, including Germany, which generates about 10.7% of its electricity from solar power
