

# What are energy storage containers used for

## Overview

---

What is a containerized energy storage system?

A Containerized Energy-Storage System, or CESS, is an innovative energy storage solution packaged within a modular, transportable container. It serves as a rechargeable battery system capable of storing large amounts of energy generated from renewable sources like wind or solar power, as well as from the grid during low-demand periods.

Can I add more container units to my energy storage system?

Each container unit is a self-contained energy storage system, but they can be combined to increase capacity. This means that as your energy demands grow, you can incrementally expand your CESS by adding more container units, offering a scalable solution that grows with your needs.

What are the benefits of energy storage system (ESS) containers?

Please download Energy Storage System (ESS) Containers brochure for reference. 1. Lower LCOS & Higher Energy Density Maximise ROI: industry-leading Levelised Cost of Storage thanks to high-capacity LFP cells. Compact footprint: hand-in-hand / back-to-back layout delivers more kWh per square metre.
